

## D02 - Report on associated IST projects

### Abstract

This document contains a collection of IST projects associated to MOME with short project descriptions, information about their monitoring/measurement approach, as well as type and description of collaboration, if already available. Information contained in D02 will be continuously updated on demand (e.g. if results of the projects become available). The updates will be published on the web-site.

### Keywords

MOME, Deliverable, D02, IST Projects

## Executive Summary

This document contains the collaboration status of the associated IST projects as well as their approach regarding IP monitoring and measurement. Selected projects have been analysed by use of a questionnaire. The following projects are covered in this report:

Project Title <sup>1</sup>	Collaboration Status	Contact to MOME via
<b>Ambient Networks</b>	Contact established	NEC
<b>DAIDALOS</b>	Contact established	FHG
<b>ENTHRONE</b>	Contact established	NEC
<b>EuQoS</b>	Contact established, project starts in September	WUT
<b>Euro6IX</b>	Contact established	TID
<b>EuroLabs</b>	Contact established, see NGN-Lab, details follow after project start	ULB
<b>EuroNGI</b>	Contact established, details follow after project start	WUT
<b>GEANT / DANTE</b>	Contact established	TER
<b>INTERMON (FP5, IST)</b>	finished, MOME can utilise results	SRF
<b>LOBSTER</b>	Contact established, project starts in October	TER
<b>NGN-Lab (FP5, IST)</b>	finished, to be continued as EuroLabs	ULB
<b>SCAMPI (FP5, IST)</b>	Contact established, MOME can utilise results	TER

**Table 1-1 Associated IST projects, overview**

In addition to the projects also Internet network operators have been interviewed.

In this early stage final conclusions cannot be drawn, but the following trends are seen:

- Many of the interviewed projects use an artificial network environment (testbed)
- Most important measurement objectives are:
  1. QoS measurements
  2. SLA/SLS monitoring
  3. traffic engineering
- There is no significant difference in the amount of usage between active and passive monitoring
- Most important metrics are:
  1. Packet loss
  2. Connectivity
  3. One-way delay
  4. Used bandwidth
- There is a high interest in co-operation with MOME, e.g. by participating in MOME related workshops for know-how exchange.

<sup>1</sup> All projects are FP6 IST projects unless otherwise mentioned.

## 1 Introduction

MOME co-ordinates European activities in the field of IP monitoring and measurement. This document is a starting point to collect projects, which have potential to co-operate in MOME. Basically all projects, which are dealing with IP technologies are potential MOME cluster participants. As the number of projects will increase during the runtime of MOME the information contained in this document will be presented and continuously updated on the MOME web-site <http://www.ist-mome.org>.

This document does not present a complete list of the project dealing with IP monitoring and measurement. It presents the projects, which have been contacted and where an answer has been received with the completion of the provided questionnaire. The document should be interpreted as a starting point to show co-operation potential in this area.

Section 2 of the project contains selected information about the projects; section 3 presents the questionnaire, which has been used to collect the information.

## 2 Description of Projects

### 2.1 Ambient Networks

#### 2.1.1 General Information

<b>Project Title</b>	Ambient Networks
<b>Project Framework</b>	FP6, IST, Integrated Project
<b>Project Number</b>	507134
<b>Project Participants</b>	41 partners
<b>Duration (Start/End)</b>	01.01.2004/31.12.2005
<b>Project URL(s):</b>	<a href="http://www.ambient-networks.org">http://www.ambient-networks.org</a>
<b>Measurement Responsible Person Contact Details</b>	Marcus Brunner NEC Europe Ltd. Network Laboratories 69115 Heidelberg, Germany brunner@netlab.nec.de
<b>Abstract</b>	The AN project will create the network solutions for mobile and wireless systems beyond 3G. It will enable scalable and affordable wireless networking while providing rich and easy to use communication services for all. It is geared towards increasing competition and cooperation in an environment populated by a multitude of user devices, wireless technologies, network operators and business actors.

#### 2.1.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	QoS measurements, SLA/SLS monitoring
<b>Measurement Methods/Algorithms</b>	Active measurement (ping, traceroute), passive measurement (network monitoring), online result analyses
<b>Metrics to be measured</b>	Connectivity, one-way delay, round-trip delay, throughput
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours)
<b>Measurement Results</b>	Aggregated data
<b>Derived Results</b>	Alarms/notifications
<b>Measurement Environment</b>	Artificial network environment (testbed)
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.1.3 Relation to MOME

<b>Status</b>	Contact established, interested in co-operation
<b>Expected Services</b>	MOME-related workshops for know-how exchange
<b>Provided Supply</b>	Monitoring/measurement data, measurement tool description, contributions to workshops/conferences

## 2.2 DAIDALOS

### 2.2.1 General Information

<b>Project Title</b>	DAIDALOS = Designing Advanced network Interfaces for the Delivery and Administration of Location independent, Optimised personal Services
<b>Project Framework</b>	FP6, IST
<b>Project Number</b>	IST-2002-506997
<b>Project Participants</b>	46 partners
<b>Duration (Start/End)</b>	November 2002 - April 2005
<b>Project Budget/Funding</b>	25,7 mill Euro / 14,7 mill Euro
<b>Project URL(s):</b>	<a href="http://www.ist-daidalos.org">http://www.ist-daidalos.org</a>
<b>Measurement Responsible Person Contact Details</b>	Task 3.2 Susana Isabel Sargento Activity 3.2.3 "Central Monitoring System" Filipe Sousa (fmsousa@inescporto.pt)
<b>Abstract</b>	Mobility has become a central aspect of the lives of European citizens - in business, education, and leisure. Due to rapid technological and societal changes, there has been a bewildering proliferation of technologies and services for mobile users. This has created a complex and confusing communications environment for both users and network operators. Further development of existing technologies, and the addition of new ones in Beyond 3G (B3G) systems, will necessitate a rethinking of fundamental technological issues in order to create user-centred and manageable communication infrastructures for the future.

### 2.2.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	Traffic control, traffic engineering, QoS measurements, accounting, SLA/SLS monitoring
<b>Measurement Methods/Algorithms</b>	Active measurement (uses mgen), passive measurement (uses OpenIMP, later also NetMate), online result analyses (results put into DB)
<b>Metrics to be measured</b>	Connectivity (checking availability of servers and clients) One-way delay (for SLA validation) Packet loss (for SLA validation) Available bandwidth (for MBAC) Link capacity (for MBAC)
<b>Timeframe of Measurement Scenarios</b>	Short-term (minutes/hours) – mid-term (days/weeks)
<b>Measurement Results</b>	Aggregated data, analysed data
<b>Results Analyses</b>	Check traffic characteristics for SLA validation
<b>Derived Results</b>	Traffic statistics, flow statistics, alarms/notifications, graphical representation of characteristics
<b>Measurement Environment</b>	
<b>Role of Measurements in Project</b>	

### 2.2.3 Relation to MOME

<b>Status</b>	Contact established, co-operation planned
<b>Expected Services</b>	Pool measurement data, measurement tool knowledge publication
<b>Provided Supply</b>	Measurement tool description

## 2.3 ENTHRONE

### 2.3.1 General Information

<b>Project Title</b>	ENTHRONE
<b>Project Framework</b>	FP6, IST, Integrated Project
<b>Project Number</b>	507637
<b>Project Participants</b>	26 partners
<b>Duration (Start/End)</b>	01.12.2003/30.11.2005
<b>Project URL(s):</b>	<a href="http://www.enthrone.org/">http://www.enthrone.org/</a>
<b>Measurement Responsible Person Contact Details</b>	Juergen Lauterjung Rohde & Schwarz GnmH & Co. KG Broadcasting Division Muehldorfstrasse 15 81671 Muenchen, Germany Juergen.Lauterjung@rsd.rohde-schwarz.com
<b>Abstract</b>	The provision of an integrated management based on the end-to-end QoS over heterogeneous networks and terminals is considered to be a key element for the successful mass market provision of audio-visual services, that would produce revenues for the content/service providers and network operators. The ENTHRONE project proposes an integrated management solution which covers an entire audio-visual service distribution chain, including content generation and protection, distribution across networks and reception at user terminals.

### 2.3.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	QoS measurements, SLA/SLS monitoring, perceived quality measurement
<b>Measurement Methods/Algorithms</b>	Active measurement, online result analyses
<b>Metrics to be measured</b>	Packet loss, available bandwidth (included in perceived quality measurement), perceived quality
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours)
<b>Measurement Results</b>	Analysed data
<b>Results Analyses</b>	Extracted indicators of perceived quality
<b>Derived Results</b>	Alarms/notifications
<b>Measurement Environment</b>	Operational network environment
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.3.3 Relation to MOME

<b>Status</b>	Contact established, interested in co-operation
<b>Expected Services</b>	MOME-related workshops for know-how exchange
<b>Provided Supply</b>	Contributions to workshops/conferences

## 2.4 EuQoS

### 2.4.1 General Information

<b>Project Title</b>	EuQoS, End-to-End Quality of Service support over
----------------------	---

	heterogeneous networks
<b>Project Framework</b>	6FP, Integrated Project
<b>Project Number</b>	Project has not yet officially started
<b>Project Participants</b>	24 partners
<b>Duration (Start/End)</b>	Planned for 3 years, from Sep 2004
<b>Project URL(s):</b>	<a href="http://www.equos.org">http://www.equos.org</a>
<b>Measurement Responsible Person Contact Details</b>	Andrzej Beben, Warsaw University Of Technology ul. Nowowiejska 15/19, 00-665, Warsaw, Poland abeben@tele.pw.edu.pl
<b>Abstract</b>	The motivation of the EuQoS project is to resolve the outstanding design issues associated with the delivery of end to end QoS service across heterogeneous networks. It is necessary to resolve the QoS outstanding issue in order that new applications can be supported by the Internet and that the infrastructure is upgraded in order that new service packages are offered by operators, ISP and other service providers.

### 2.4.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	Traffic control, traffic engineering, architecture evaluation, QoS measurements, accounting, SLA/SLS monitoring, failure management
<b>Measurement Methods/Algorithms</b>	Active measurement, passive measurement (not yet decided), online result analyses, offline result analyses
<b>Metrics to be measured</b>	Connectivity, one-way delay, round-trip delay, delay variation, packet loss, throughput
<b>Timeframe of Measurement Scenarios</b>	Short-term (minutes/hours) – mid-term (days/weeks)
<b>Measurement Results</b>	Raw data, aggregated data, analysed data
<b>Results Analyses</b>	Details not known yet
<b>Derived Results</b>	Traffic statistics, graphical representation of characteristics
<b>Measurement Environment</b>	Artificial network environment (testbed), Combined (e.g. VPN-Testbed over operational network), EuQoS testbeds will be connected by the GEANT network
<b>Role of Measurements in Project</b>	Supporting activity for project

### 2.4.3 Relation to MOME

<b>Status</b>	Contact established
<b>Expected Services</b>	Measurement tool knowledge publication, MOME-related workshops for know-how exchange
<b>Provided Supply</b>	Measurement tool description, contributions to workshops/conferences
<b>Other</b>	The EuQoS project has not yet officially started, so detailed answers to some of the questions are not yet known. The aim of measurements in EuQoS is twofold: (1) to support network functions, like admission control, traffic engineering, failure management, and (2) to validate the architecture in the trials. The provided answers give outline of planned measurement activities of EuQoS, but some details can change during development of the project.

## 2.5 Euro6IX

### 2.5.1 General Information

<b>Project Title</b>	Euro6IX
----------------------	---------

<b>Project Framework</b>	FP5, IST
<b>Project Number</b>	IST-2001-32161
<b>Project Participants</b>	17 partners
<b>Duration (Start/End)</b>	36 month, 01.01.2002/31.12.2004
<b>Project Budget/Funding</b>	€ 15.527.711 / € 7.697.308
<b>Project URL(s):</b>	<a href="http://www.euro6ix.org/">http://www.euro6ix.org/</a>
<b>Measurement Responsible Person Contact Details</b>	There is no single responsible in Euro6IX due to the nature of the project (a backbone made of different admin domains). Each Telco in Euro6IX monitors an IPv6 IX and national connections. The top responsible of measurement systems is WP 3 leader (Carlos Ralli Ucendo, ralli@tid.es, +34913374563 C/Emilio Vargas 6 28043 – Madrid, Spain).
<b>Abstract</b>	The goal of the Euro6IX project is to support the rapid introduction of IPv6 in Europe. To wards this target, the project has defined very concrete objectives that will be carried out according to a specific work plan. This describes the Pan-European network design (native IPv6), network deployment, research on advanced network services, development of applications (that will be validated through the involvement of user groups and international trials), and active dissemination activities, including events and conferences, contributions to standards (IETF and RIPE among others), publication of papers and active promotion of all the publicly available project results through the project web site.

### 2.5.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	Traffic control, traffic engineering, architecture evaluation, QoS measurements, intrusion detection, SLA/SLS monitoring, failure management, discover shared management techniques
<b>Measurement Methods/Algorithms</b>	Active measurement: packet probing ("MAGALIA" application: ping & services module); Passive measurement: SNMP ("MAGALIA" SNMP module). Other tools: Looking Glass, Nagios; Online result analyses: MAGALIA is an HP-Openview like Real-Time graphic monitoring tool, Shared Management functionality in Euro6IX allows to draw an overall backbone status image without querying one telco's routers from another admin domain; Offline result analyses: WWW logs analyzers such as webalizer or awstats.
<b>Metrics to be measured</b>	Connectivity: links: up, down, physical failure, administrative down ...; Round-trip delay: 'pingstat': script based tool processing ping outputs; Delay variation: using pingstat; Packet loss: using pingstat; Throughput: Magalia. See used/available bandwidth.; Used bandwidth: Magalia uses text tags (used bandwidth) and code colors to represent (% of link bandwidth); Available bandwidth: Colours used to draw links in Magalia represent % of used/available link bandwidth; Services availability
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours) – long-term (month and more)
<b>Measurement Results</b>	Raw data, aggregated data, analysed data

<b>Results Analyses</b>	"Topaz", an IPv6 IDS makes on-line packet analysis and sampling to detect suspicious packet patterns. "Magalia" makes SNMP queries and analyses the output to present graphical contextual maps in a real-time basis.
<b>Derived Results</b>	Traffic statistics, flow statistics, alarms/notifications, graphical representation of characteristics

### 2.5.3 Relation to MOME

<b>Status</b>	Contact established
---------------	---------------------

## 2.6 EuroLabs

As the project has still not started, currently no information available. EuroLabs as the successor of NGN-Lab plans to participate in MOME cluster.

## 2.7 EuroNGI

EuroNGI (Design and Engineering of the Next Generation Internet) is a network of excellence, with 58 partner institutions. Contact was established with responsible persons from workpackages working on Measurement Platforms and IP Traffic Characterization and Measurements. The potential cooperation with MOME includes sharing of information on developed tools and measurement data collected by EuroNGI.

## 2.8 GÉANT

### 2.8.1 General Information

<b>Project Title</b>	GEANT/DANTE
<b>Project Framework</b>	FP5/6, IST
<b>Project Number</b>	IST-2000-26417
<b>Project Participants</b>	European NRENs, DANTE
<b>Duration (Start/End)</b>	1st November 2000, 48 months
<b>Project Budget/Funding</b>	€200,000,000, funded €80,000,000
<b>Project URL(s):</b>	<a href="http://www.geant.net">http://www.geant.net</a>
<b>Measurement Responsible Person Contact Details</b>	Nicolas Simar / Dante Francis House Hills Road, 112 CB2 1PQ Cambridge UK
<b>Abstract</b>	The GÉANT project is a collaboration between 26 National Research and Education Networks representing 30 countries across Europe, the European Commission, and DANTE. Its principal purpose has been to develop the GÉANT network - a multi-gigabit pan-European data communications network, reserved specifically for research and education use. The project also covers a number of other activities relating to research networking. These include network testing, development of new technologies and support for some research projects with specific networking requirements.

### 2.8.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	Traffic engineering, QoS measurements, intrusion detection, SLA/SLS monitoring, failure management, troubleshooting (IP layer to application layer)
<b>Measurement Methods/Algorithms</b>	Active measurement: active packet probing: IPPM for OWD, jitter (trial); tcp throughput (trial for troubleshooting) Passive measurement: SNMP, "show" commands, XML for link/interfaces statistics and router statistics; ISIS packet capture

	(isis session with a PC running ISIS); iBGP (full mesh between routers and a PC where zebra is running); netflow (customer to customer traffic matrices) Online result analyses, offline result analyses (routing protocol analyses)
<b>Metrics to be measured</b>	Connectivity, one-way delay (IPPM), delay variation (IPPM), packet loss (IPPM , interface), link capacity
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours) – long-term (month and more)
<b>Measurement Results</b>	Raw data, aggregated data
<b>Results Analyses</b>	Not specified
<b>Derived Results</b>	Flow statistics, alarms/notifications, graphical representation of characteristics
<b>Measurement Environment</b>	Operational network environment
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.8.3 Relation to MOME

<b>Status</b>	Contact established, interested in co-operation
<b>Expected Services</b>	Pool measurement data, MOME-related workshops for know-how exchange
<b>Provided Supply</b>	

## 2.9 INTERMON

### 2.9.1 General Information

<b>Project Title</b>	INTERMON
<b>Project Framework</b>	IST, FP5, Key Action: Essential Technologies and Infrastructures / Simulation and Visualisation
<b>Project Number</b>	IST-2001-34123
<b>Project Participants</b>	12 partners: Salzburg Research, Telecom Italia, Uni Bern, Uni Dortmund, Waterford Institute of Technology, Fraunhofer FOKUS, Siemens Austria, T-Systems Nova, Telefonica I+D, NEC Europe, Budapest University of Technology and Economics, Consorzio Interuniversitario Nazio
<b>Duration (Start/End)</b>	26 Month April 2002 - May 2004
<b>Project Budget/Funding</b>	5 093 335 € / EC funded: 2 800 000 €
<b>Project URL(s):</b>	<a href="http://www.ist-intermon.org">http://www.ist-intermon.org</a>
<b>Measurement Responsible Person Contact Details</b>	Ilka Miloucheva Salzburg Research Forschungsgesellschaft m.b.H. Jakob-Haringer Str. 5/III, 5020 Salzburg, Austria imilou@salzburgresearch.at
<b>Abstract</b>	InterMON project objectives are analysis of QoS and SLAs of applications in inter-domain environment (spatial composition of end-to-end into inter-domain QoS); border router traffic flow monitoring, modelling and simulation for inter-domain capacity planning and traffic engineering (inter-domain traffic matrix); policy controlled data collection; distributed data base with automated information processing; advanced modelling and forecasting toolkit for inter-domain QoS and traffic; contribution to standardisation bodies and international research.

### 2.9.2 Monitoring and Measurement Approach

<b>Measurement Objectives</b>	Traffic engineering, architecture evaluation, QoS measurements,
-------------------------------	---

	accounting, SLA/SLS monitoring
<b>Measurement Methods/Algorithms</b>	Active measurement, passive measurement, offline result analyses
<b>Metrics to be measured</b>	One-way delay, packet loss, packet loss patterns, used bandwidth, available bandwidth, BGP message monitoring / path change monitoring
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours) – mid-term (days/weeks)
<b>Measurement Results</b>	Raw data, aggregated data, analysed data
<b>Result Analyses</b>	Pattern analyses (VoIP related) measurement-based modelling
<b>Derived Results</b>	Traffic statistics, flow statistics, graphical representation of characteristics, model evaluation
<b>Measurement Environment</b>	Artificial network environment (testbed), operational network environment, combined (e.g. VPN-Testbed over operational network)
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.9.3 Relation to MOME

<b>Status</b>	Project finished, co-operation existed, MOME utilises results
<b>Expected Services</b>	Results dissemination, MOME-related workshops for know-how exchange
<b>Provided Supply</b>	Monitoring/measurement data, measurement tool description, contributions to workshops/conferences

## 2.10 LOBSTER

As the project has still not started, only a subset of information is currently available.

### 2.10.1 General Information

<b>Project Title</b>	LOBSTER: Large Scale Monitoring of Broadband Internet Infrastructure
<b>Project Framework</b>	FP6, IST
<b>Project Number</b>	004336
<b>Project Participants</b>	9 partners: FORTH, VU, UNINETT, CESNET, Endace, FORTHnet, Alcatel, TNO, TERENA
<b>Duration (Start/End)</b>	1/1/05 – 31/12/05 (approx.)

### 2.10.2 Monitoring and Measurement Approach

<b>Measurement Environment</b>	Artificial network environment (testbed), operational network environment
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.10.3 Relation to MOME

<b>Status</b>	Contact established
---------------	---------------------

## 2.11 NGN-LAB

### 2.11.1 General Information

<b>Project Title</b>	Next Generation Networks Laboratory / NGN-LAB
<b>Project Framework</b>	FP5, IST, Accompanying Measure
<b>Project Number</b>	IST-2000-26041
<b>Project Participants</b>	5+3 partners: NEC-Europe; ULB; Rescom; Telscom; MCLab; Subcontractors (VUB, Cisco, Dimension Data)
<b>Duration (Start/End)</b>	01/01/2001 - 31/12/2003

<b>Project Budget/Funding</b>	€1,772,167/ €818,633 from the EC
<b>Project URL(s):</b>	<a href="http://www.ngnlab.org/">http://www.ngnlab.org/</a>
<b>Measurement Responsible Person Contact Details</b>	Antal Bulanza Service Télématique et Communication Université Libre de Bruxelles Campus de la Plaine - CP 230, Boulevard du Triomphe B-1050 Brussels Email: bulanza@helios.ihe.ac.be
<b>Abstract</b>	NGN-LAB is a new project started in January 2001 in the scope of the European Commission "Information Society Technologies" (IST) program. Called NGN-LAB for "Next Generation Networks Laboratory", it is coordinated by the Universities of Brussels (ULB and VUB) and will consist essentially of two interlinked laboratories, in Brussels (EuroDemo) and Basel (MULTICOMLAB).

### 2.11.2 Monitoring and Measurement Approach

<b>Measurement Environment</b>	Artificial network environment (testbed)
<b>Role of Measurements in Project</b>	Integrated part in the project

### 2.11.3 Relation to MOME

<b>Status</b>	Finished, to be continued as EuroLabs
---------------	---------------------------------------

## 2.12 SCAMPI

### 2.12.1 General Information

<b>Project Title</b>	SCAMPI
<b>Project Framework</b>	IST, FP5
<b>Project Number</b>	IST-2001-32404
<b>Project Participants</b>	9 partners: Trans-European Research and Education Networking Association (TERENA), Czech National Research and Education Network (CESNET), Foundation for Research and Technology Hellas (FORTH), Hellenic Telecommunication and Telematics Application Company S.A (FORTHnet), Interuniversitar Micro-Elektronica Centrum (IMEC), Leiden Institute of Advanced Computer Science (LIACS), Masaryk University Brno, NETikos S.P.A, UNINETT A/S
<b>Duration (Start/End)</b>	30 Month April 2002 - September 2004
<b>Project Budget/Funding</b>	5 500 000 € / 2 750 000 €
<b>Project URL(s):</b>	<a href="http://www.ist-scampi.org">http://www.ist-scampi.org</a>
<b>Measurement Responsible Person Contact Details</b>	Sven Ubik, Cesnet ubik@cesnet.cz
<b>Abstract</b>	SCAMPI is a two-and-a-half-year European project to develop a scaleable monitoring platform for the Internet. It also aims to promote the use of monitoring tools for improving services and technology.  The project will develop a network adapter, initially at 10 Gbps speeds, tailored to the needs of monitoring tools. This includes development of an open and extensible monitoring architecture to support a secure and programmeable shared monitoring infrastructure. It will also investigate the technical challenges of developing monitoring systems for 100 Gbps speeds and beyond.

**2.12.2 Monitoring and Measurement Approach**

<b>Measurement Objectives</b>	Traffic engineering, QoS measurements, intrusion detection, accounting, traffic characterisation
<b>Measurement Methods/Algorithms</b>	Passive measurement: Packet analysis, NetFlow analysis Online result analyses: Intrusion detection (signatures), QoS monitoring Offline result analyses: QoS monitoring (correlate flow data after measurements)
<b>Metrics to be measured</b>	One-way delay: QoS monitoring Delay variation: QoS monitoring Packet loss: QoS monitoring Used bandwidth: QoS monitoring/DoS attack detection Occurrence of patterns: intrusion detection
<b>Timeframe of Measurement Scenarios</b>	Short-term measurements (minutes/hours) – long-term (month and more)
<b>Measurement Results</b>	Raw data, aggregated data, analysed data
<b>Results Analyses</b>	QoS analysis (delay, jitter, loss,...) using hashing based sampling and packet filtering, occurrence of patterns in data for intrusion detection, Network usage for traffic characterisation and accounting using NetFlow and IPFIX,...
<b>Derived Results</b>	Traffic statistics, flow statistics, alarms/notifications, graphical representation of characteristics
<b>Measurement Environment</b>	Artificial network environment (testbed), operational network environment
<b>Role of Measurements in Project</b>	Supporting activity for project

**2.12.3 Relation to MOME**

<b>Status</b>	Contact established, MOME can use results obtained by the SCAMPI project
<b>Expected Services</b>	Measurement tool knowledge publication, MOME-related workshops for know-how exchange
<b>Provided Supply</b>	Contributions to workshops/conferences, platform for monitoring

### 3 Appendix I – Questionnaire

An on-line version of this questionnaire is available at <http://www.ist-mome.org>.

#### 3.1 General Part

<b>1 General Part</b>	
This questionnaire prepared by the MOME consortium is designed to collect information about IP monitoring and measurement activities in Europe. Part 1 contains the general part of this survey.	
<b>1.1 Information on the Interviewee</b>	
<b>1.1.0: Project Title, operator/NREN name</b>	
Provide the name / acronym of the interviewed project or the name of the interviewed company. For reference, use the same name also for the other parts of the questionnaire.	Please write your answer here: <input style="width: 100%; height: 20px;" type="text"/>
<b>1.1.1: Category</b>	
Select the category of the interview partner. In case more than one applies, please fill separate questionnaires for each.	Please tick <b>only one</b> of the following: <input type="checkbox"/> Project <input type="checkbox"/> Operator <input type="checkbox"/> Research/Educational Network
<b>1.1.2: Interviewed Person Contact Details</b>	
Provide name/company, address and email	Please write your answer in the box below: <input style="width: 100%; height: 100px;" type="text"/>
<b>1.1.3: (Project) Manager Contact Details</b>	
Provide name/company, address and email	Please write your answer in the box below: <input style="width: 100%; height: 100px;" type="text"/>
<b>1.1.4: Measurement Responsible Person Contact Details</b>	

Provide name/company, address and email	Please write your answer in the box below: <div style="border: 1px solid gray; height: 100px; width: 100%;"></div>
---	---

**1.1.5: Other Information on the Interviewee**

Include any other information on the interview partner, e.g. relation to MOME, why contacted, how contact was established, etc.	Please write your answer in the box below: <div style="border: 1px solid gray; height: 100px; width: 100%;"></div>
---	---

**1.2 Monitoring/Measurement approach**

**1.2.1: Measurement Objectives**

Indicate for which objectives measurements are used for.	Please tick <b>any</b> that apply <ul style="list-style-type: none"> <li><input type="checkbox"/> traffic control</li> <li><input type="checkbox"/> traffic engineering</li> <li><input type="checkbox"/> architecture evaluation</li> <li><input type="checkbox"/> QoS measurements</li> <li><input type="checkbox"/> intrusion detection</li> <li><input type="checkbox"/> accounting</li> <li><input type="checkbox"/> SLA/SLS monitoring</li> <li><input type="checkbox"/> failure management</li> </ul> Other: <input style="width: 150px;" type="text"/>
--	--

**1.2.2: Measurement Methods/Algorithms**

Indicate, which methodologies/algorithms are used. Add a comment to give a detailed hint on the methodology (e.g. SNMP, link monitoring, active packet probing,...)	Please tick any that apply and provide a comment <ul style="list-style-type: none"> <li><input type="checkbox"/> active measurement <input style="width: 150px;" type="text"/></li> <li><input type="checkbox"/> passive measurement <input style="width: 150px;" type="text"/></li> <li><input type="checkbox"/> online result analyses <input style="width: 150px;" type="text"/></li> <li><input type="checkbox"/> offline result analyses <input style="width: 150px;" type="text"/></li> </ul>
---	---

**1.2.3: Metrics to be measured**

Indicate which metrics are measured. If a standard metric is used, please specify (e.g. IPPM, ITU-T).	Please tick any that apply and provide a comment
	<input type="checkbox"/> connectivity <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> one-way delay <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> round-trip delay <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> delay variation <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> packet loss <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> packet loss patterns <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> packet re-ordering <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> throughput <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> used bandwidth <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> available bandwidth <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> bulk data transfer capacity <input style="width: 100%;" type="text"/>
	<input type="checkbox"/> link capacity <input style="width: 100%;" type="text"/>

**1.3 Measurement Scenarios**

**1.3.1: Timeframe**

	Please tick <b>any</b> that apply
	<input type="checkbox"/> short-term measurements (minutes/hours)
	<input type="checkbox"/> mid-term (days/weeks)
	<input type="checkbox"/> long-term (month and more)

**1.3.2: Measurement Results**

	Please tick <b>any</b> that apply
	<input type="checkbox"/> raw data
	<input type="checkbox"/> aggregated data
	<input type="checkbox"/> analysed data

[Answer this question if you answered 'analysed data' to question '1.3.2']

**1.3.2.1: Which kind of Analyses?**

<p>Provide information on the analyses, like outlier detection, packet sampling, on-line/off-line analyses, etc.</p>	<p>Please write your answer in the box below:</p> <div style="border: 1px solid black; height: 100px; width: 100%;"></div>
--	--

**1.3.3: Derived Results**

	<p>Please tick <b>any</b> that apply</p> <p><input type="checkbox"/> traffic statistics</p> <p><input type="checkbox"/> flow statistics</p> <p><input type="checkbox"/> alarms/notifications</p> <p><input type="checkbox"/> graphical representation of characteristics</p> <p>Other: <input style="width: 150px;" type="text"/></p>
--	---

**1.4 Used Measurement Tools**

Which tools are used for measurements, ranked in terms of usage from 1 to 5. Either mention well-known tools or provide answers to the questions in the tools part.

**1.4.1: Used Well-known Tools**

<p>Enter tools here, which are not developed in the project/company. The decision whether the tool is well-known or not is up to the interviewing person. Also depend on how much information about the tool can be found on the web.</p>	<p>Please write your answer(s) here:</p> <p>Tool 1:: <input style="width: 150px;" type="text"/></p> <p>Tool 2:: <input style="width: 150px;" type="text"/></p> <p>Tool 3:: <input style="width: 150px;" type="text"/></p> <p>Tool 4:: <input style="width: 150px;" type="text"/></p> <p>Tool 5:: <input style="width: 150px;" type="text"/></p>
---	---

**1.4.2: New/Own Developed Tools**

<p>Enter tools here, which do not fit into question 1.4.1 (e.g. if the tool is a development for this project/company). For these tools also fill in the tools part of the questionnaire.</p>	<p>Please write your answer(s) here:</p> <p>Tool 1:: <input style="width: 150px;" type="text"/></p> <p>Tool 2:: <input style="width: 150px;" type="text"/></p> <p>Tool 3:: <input style="width: 150px;" type="text"/></p> <p>Tool 4:: <input style="width: 150px;" type="text"/></p> <p>Tool 5:: <input style="width: 150px;" type="text"/></p>
---	---

**1.5 Standards + Standardisation plans**

**1.5.1: Used standards**

Of which standardisation organisations (specify area/group, if applicable)	<p><u>Please tick any that apply and provide a comment</u></p> <p><input type="checkbox"/> IETF: <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> ITU: <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> ETSI: <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> DMTF: <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> 3GPP: <input style="width: 150px;" type="text"/></p>
--	--

**1.5.2: Submit new standards**

To which standardisation organisations?	<p><u>Please tick any that apply</u></p> <p><input type="checkbox"/> IETF</p> <p><input type="checkbox"/> ITU</p> <p><input type="checkbox"/> ETSI</p> <p><input type="checkbox"/> DMTF</p> <p><input type="checkbox"/> 3GPP</p> <p>Other: <input style="width: 150px;" type="text"/></p>
---	---

**1.5.2.1: Please specify what is intended to be standardised**

	<p><u>Please write your answer in the box below:</u></p> <div style="border: 1px solid black; height: 100px; width: 100%;"></div>
--	---

**1.5.3: Expecting new standards**

Shortly describe the topic(s), in which standards are missing.	<p><u>Please write your answer in the box below:</u></p> <div style="border: 1px solid black; height: 100px; width: 100%;"></div>
--	---

**1.5.4: Awaiting draft standards to be finished**

Provide information on the standards that are awaited, but still drafts currently.	<p><u>Please write your answer in the box below:</u></p> <div style="border: 1px solid black; height: 50px; width: 100%;"></div>
--	--

	
--	--

**1.6 Expectations from MOME**

**1.6.1: Expected Services**

	<p>Please tick <b>any</b> that apply</p> <p><input type="checkbox"/> pool measurement data</p> <p><input type="checkbox"/> support standardisation activities</p> <p><input type="checkbox"/> measurement tool knowledge publication</p> <p><input type="checkbox"/> MOME-related workshops for know-how exchange</p> <p>Other: <input type="text"/></p>
--	--

**1.6.2: Provided Supply**

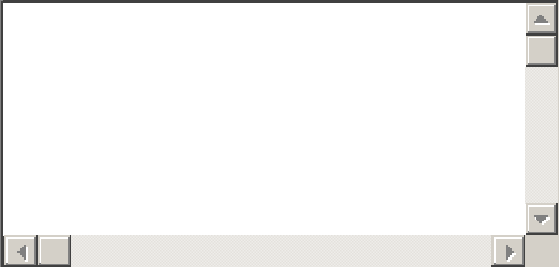

<p>This is not legally binding! Just mention the potential.</p>	<p>Please tick <b>any</b> that apply</p> <p><input type="checkbox"/> monitoring/measurement data</p> <p><input type="checkbox"/> measurement tool description</p> <p><input type="checkbox"/> contributions to workshops/conferences</p> <p>Other: <input type="text"/></p>
---	---

**1.6.3: Co-operation potential with MOME:**

	<p>Please tick <b>any</b> that apply</p> <p><input type="checkbox"/> co-operation exists</p> <p><input type="checkbox"/> co-operation planned</p> <p><input type="checkbox"/> interested in co-operation</p> <p><input type="checkbox"/> not interested in co-operation</p> <p>Other: <input type="text"/></p>
--	--

**1.7 Final Remarks**

**1.7: Final Remarks**

<p>Space for any other comments. You can also refer to above questions. If doing so, simply provide the corresponding question number.</p>	<p>Please write your answer in the box below:</p> 
--	--

### 3.2 Projects-only Part

**2 Projects-only Part**  
 This questionnaire prepared by the MOME consortium is designed to collect information about IP monitoring and measurement activities in Europe. Part 2 contains the part dedicated to projects only.

#### 2.1 Project Key Data

##### 2.1.0: Project Title

Provide the name / acronym of the interviewed project or the name of the interviewed company. For reference, use the same name also for the other parts of the questionnaire.	<p>Please write your answer here:</p> <input style="width: 100%; height: 20px;" type="text"/>
---	---

##### 2.1.1: Project Framework

Please specify sub-categories (e.g. IP, NoE, COST action number etc.)	<p>Please tick any that apply and provide a comment</p> <p><input type="checkbox"/> IST <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> EURESCOM <input style="width: 150px;" type="text"/></p> <p><input type="checkbox"/> COST <input style="width: 150px;" type="text"/></p>
---	--

##### 2.1.2: Project Facts

	<p>Please write your answer(s) here:</p> <p>Project Number (if any): <input style="width: 150px;" type="text"/></p> <p>Project Participants: <input style="width: 150px;" type="text"/></p> <p>Duration (Start/End): <input style="width: 150px;" type="text"/></p> <p>Project Budget/Funding: <input style="width: 150px;" type="text"/></p> <p>Project URL(s): <input style="width: 150px;" type="text"/></p>
--	---

#### 2.2 Measurement Environment and Role

##### 2.2.1: Measurement Environment

	<p>Please tick any that apply</p> <p><input type="checkbox"/> artificial network environment (testbed)</p> <p><input type="checkbox"/> operational network environment</p> <p><input type="checkbox"/> combined (e.g. VPN-Testbed over operational network)</p> <p>Other: <input style="width: 150px;" type="text"/></p>
--	--

##### 2.2.2: Role of Measurements in Project

	<p>Please tick any that apply</p> <p><input type="checkbox"/> integrated part in the project</p> <p><input type="checkbox"/> supporting activity for project</p>
--	--

	Other: <input data-bbox="486 185 1117 241" type="text"/>
